### DID YOU KNOW?

That the first digital camera was as compact as a toaster!

The first digital camera was the "DS-1P," which was invented by Steven Sasson, an engineer at Eastman Kodak, in 1975. It was a large and bulky device that weighed about 8 pounds (3.6 kilograms). The DS-1P captured black and white images with a resolution of 0.01 megapixels (10,000 pixels), stored the images onto a cassette tape, and took approximately 23 seconds to record a single image.
